EXAMINER'S AMENDMENT

1. An extension of time under 37 CFR 1.136(a) is required in order to make an examiner's amendment which places this application in condition for allowance. During a telephone conversation conducted on 5/20/2003, Mr. David Henn requested an extension of time for one (1) MONTH(S) and authorized the Commissioner to charge Deposit Account No. 24-0025 the required fee of \$110.00 for this extension and authorized the following examiner's amendment. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

2. The application has been amended as follows:

IN THE CLAIMS

Claims 28, 32, 34 are cancelled.

Claims 21, 23, 24, 27, 30-31, 35 are rewritten as follows:

21. A MEMS formation method including:

providing a SOI wafer including a single crystal silicon layer attached to an insulator layer;

forming at least one first MEMS component by patterning the single crystal silicon layer;

depositing at least one layer of polysilicon on the patterned single crystal silicon; and

forming at least one second MEMS component by patterning the polysilicon.

22. The method of claim 21 wherein the at least one second MEMS component is a hinge.

1251 - \$ 110.00 5/22/03

Art Unit: 2872

D3 23.1 22 24. The method of claim 23 wherein the at least one first MEMS component is a mirror retained by the hinge.

04 24.1 A MEMS formation method including:
providing a SOI wafer including a single crystal silicon layer attached to an insulated layer;
forming at least one first MEMS component by patterning the single crystal silicon layer;
depositing at least one layer of polysilicon on the patterned single crystal silicon; [and] wherein
forming at least one first MEMS component includes forming a deflecting mirror, and forming at
least one second MEMS component by patterning the polysilicon, the at least one second MEMS
component including a hinge retaining the deflecting mirror.

In claim 29, line 1, "28" is replaced by --27--.

D5 28.1 30. A MEMS device comprising:
at least one single crystal silicon component bonded to an insulator that rests on a handle
wafer; and

a polysilicon hinge derived from a layer of polysilicon applied over the at least one single
crystalline component.

04 29.1 28 31. The MEMS device of claim 30 wherein the at least one single crystal silicon
component comprises a deflecting mirror retained by the hinge.

07 31.1 35. A MEMS device comprising:
at least one single crystal silicon component bonded to an insulator that rests on a handle
wafer; and

Art Unit: 2872

01
end
at least one polysilicon component derived from a layer of polysilicon applied over the at least one single crystalline silicon component;

a recess in the handle wafer aligned with the at least one single crystal silicon component;

and

a semiconductor light emitter mounted in the recess to emit a light beam at the single crystal silicon component.

The following is an examiner's statement of reasons for allowance:

Claims 1-21, 23-36 are allowed over the prior art for at least the reason that the prior art fails to teach or reasonably suggest, regarding claims 1-20 an integrated laser beam scanning structure, and a method for making such a structure, wherein a semiconductor light emitter is mounted in the recess of a wafer on which a deflecting and a torsional mirror are fashioned, and a light beam emitted from the light source is deflected by the deflecting mirror onto the torsional mirror, regarding claims 21, 23-26, 27, 29, a MEMS formation method wherein a second MEMS component is formed by patterning the polysilicon, regarding claims 30-34, a MEMS device comprising a polysilicon hinge derived from a layer of polysilicon applied over the at least one single crystalline component, and regarding claims 35-36, a MEMS device further comprising a semiconductor emitter mounted in the recess and oriented to emit a light beam at the single crystal component, as set forth in the claimed combination.

Art Unit: 2872

The pertinent art of Swartz (US 5,625,483) discloses an integrated laser scanning device wherein a laser light source disposed on a silicon substrate emits light that is reflected from micromirrors also disposed on the substrate (Figs. 3 and 5). Sun (US 2002/0067533) discloses a MEMS-based scanner where a laser attached to a single crystal silicon substrate emits light towards a pair of mirrors made from a second layer (Fig. 14).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dr. Leo Boutsikaris whose telephone number is (703) 306-5730.
